

GUI Coursework Proposal – DSE 23.3F

Name: L ABEYSUNDERA

Index No: CODSE233-123

Selected System/Domain:

Restaurant Management System

Brief Introduction to the System:

The Restaurant Management System is a software application designed to simplify and optimize the day-to-day operations of a restaurant. It provides a centralized platform to manage various tasks, including order processing, menu updates, staff management, and inventory tracking. With an intuitive graphical user interface, the system ensures efficient operation and enhances the overall customer and staff experience.

Main Functions covered in the System:

Menu Management:

- Add, update, edit and remove menu items.
- Manage pricing and item availability.

Order Processing:

- Capture and process customer orders.

Staff Management:

- Record staff details, schedules, and roles.

Dashboard:

- Provide real-time insights into orders, sales, and inventory.

Report Generation:

- Generate reports on sales, staff performance, and inventory usage.

Simple and Clear Buttons

- Buttons like Add, Update, Delete, and Clear make it easy to manage records

Tools, Technologies, Frameworks Used in the Project:

Programming Language:

- C#

Development Environment:

- Microsoft Visual Studio

Framework:

- .NET Framework or .NET Core

Database:

- SQL Server Management Studio
